June, 1996

Hello Again.

We wish to extend our congratulations to all of our graduating patients, both young and old. It is a proud time for both parents and those graduating. Best of luck to you all.

It's kind of funny, but did you know that most all people leave the water faucet on while brushing their teeth. I have to admit - - - I did too. That wastes at least 2-3 gallons of water!

Imagine this - at least half of the people in the U.S. leaving the water on while brushing just once a day. That's 125 million people times 3 gallons times 365 days a year. That's over 100 BILLION gallons of fresh water going down the drain.

Help do your part to preserve our natural resources. Just wet your toothbrush and leave off the faucet while you are brushing. Turn the faucet on again to rinse.

Good news! . . . Lisa just became an Aunt for the first time. Her sister had a baby boy. Congratulations to the both of them.

Sincerely,

*Lisa*
